Descripción del programa

The demand for data scientists is projected to grow 10x faster than other occupations (Source: US Bureau of Labor Statistics). This IBM Data Science Professional Certificate gives you the job-ready skills and practical experience you need to start your career in data science and machine learning. No prior computer science or programming experience is required.

Data scientists analyze and interpret complex, large datasets using data mining, machine learning, and predictive modeling techniques. They then seek to uncover patterns, trends, and insights that help businesses make informed decisions.

During this program, you'll learn Python programming, SQL for database querying, data manipulation with Pandas and Numpy, data visualization with Matplotlib and Seaborn, and machine learning with Scikit-learn. You'll work hands-on with data science tools like Jupyter Notebooks, RStudio, and IBM watsonx. You'll use GitHub for version control and access data sources with APIs. Plus, you'll gain valuable practical skills through hands-on labs, course projects, and a capstone project you can put on your resume and talk about in interviews.

If you're looking to get started in data science, this program gives you the job-ready skills you need to catch the eye of an employer. Enroll today and look forward to kickstarting a highly rewarding career.

Ver menos

Hay 10 cursos en este programa

Introduction to Data Science

3 - 6 hours per week, por 6 semanas
Learn about the world of data science first-hand from real data scientists.

Ver curso

Data Science Tools

3 - 7 hours per week, por 7 semanas
Learn about the most popular data science tools, including how to use them and what their features are.

Ver curso

The Data Science Method

3 - 7 hours per week, por 7 semanas
Learn about the methodology, practices and requirements behind data science to better understand how to problem solve with data and ensure data is relevant and properly manipulated to address a variety of real-world projects and business scenarios.

Ver curso

SQL for Data Science

2 - 4 hours per week, por 4 semanas
Learn how to use and apply the powerful language of SQL to better communicate and extract data from databases - a must for anyone working in the data science field.

Ver curso

Python Basics for Data Science

4 - 10 hours per week, por 3 semanas
This Python course provides a beginner-friendly introduction to Python for Data Science. Practice through lab exercises, and you'll be ready to create your first Python scripts on your own!

Ver curso

Python for Data Science Project

4 - 5 hours per week, por 1 semana
This mini-course is intended for you to demonstrate foundational Python skills for working with data.

Ver curso

Analyzing Data with Python

2 - 4 hours per week, por 5 semanas
In this course, you will learn how to analyze data in Python using multi-dimensional arrays in numpy, manipulate DataFrames in pandas, use SciPy library of mathematical routines, and perform machine learning using scikit-learn!

Ver curso

Visualizing Data with Python

2 - 4 hours per week, por 5 semanas
Data visualization is the graphical representation of data in order to interactively and efficiently convey insights to clients, customers, and stakeholders in general.

Ver curso

Machine Learning with Python: A Practical Introduction

4 - 6 hours per week, por 5 semanas
Machine Learning can be an incredibly beneficial tool to uncover hidden insights and predict future trends. This Machine Learning with Python course will give you all the tools you need to get started with supervised and unsupervised learning.

Ver curso

Data Science and Machine Learning Capstone Project

3 - 4 hours per week, por 6 semanas
Create a project that you can use to showcase your Data Science skills to prospective employers. Apply various data science and machine learning techniques to analyze and visualize a data set involving a real life business scenario and build a predictive model.

Ver curso

Lo que aprenderá

- Job-ready data science skills employers look for, supported by hands-on experience and an IBM Professional Certificate you can show on your resume.
- Python programming for data science and data manipulation using libraries like Pandas and Numpy to clean and prepare data.
- Data analysis and visualization techniques using Matplotlib and Seaborn; crucial skills for presenting insights to stakeholders.
- How to write SQL queries to manage and extract data from relational databases; key for database management.
- Machine learning fundamentals, including how to build machine learning models with Scikit-learn.
- How to use popular data science tools such as Jupyter Notebooks, IBM watsonx, GitHub, and APIs.

Conozca a sus instructores

Alex Aklson
Ph.D., Data Scientist at IBM
IBM

Romeo Kienzler
Chief Data Scientist at IBM
