What is the relationship between data, information and knowledge?
Explain in your own words. *Maximum 100 words.*

Data, information, and knowledge are relied on each other:

- Data consists of raw, unorganized elements without context (e.g., individual characters, numbers or figures).
- Information is data which has been structured, processed, and with some given context that helps to make it meaningful.
- Knowledge is built on information by integrating experience, learning, and expertise. It appears after applying this processed information to understand situations, make decisions, and solve specific business/personal challenges.

Name and describe the three components of information systems. *Maximum 100 words.*

The three core components of information systems are:

- Hardware: Are the physical devices (such as processors, monitors, and keyboards) which accept, process, and display data and information via some peripheral or output mean.
- Software: Represents programs or sets of instructions that enable the hardware to process data.
- Database: Conformed by a structured collection of related files or tables which contain data stored for processing.
