Describe five situations in which information technology affects organisations.

Maximum 300 words.

Five situations in which information technology affects organisations:

- Data security breaches and cyberattacks: if a breach appears in database security, customer record, supplier data, or proprietary business logic could be exposed, leading to internal financial crisis, legal penalties, and severe reputational damage.
- Infrastructure downtime and connectivity failures: When there are server-client disconnections, clients and internal teams are prevented from accessing core services, disrupting operational processes and stopping vital/supervised business activities.
- Automation of redundant core business workflows: Available software solutions could be used to automate repetitive administrative and manufacturing tasks leading to higher operational efficiency, human error reduction, and labor costs minimisation.
- Enhanced decision-making via data analytics: In-depth and real-time data analysis could be used to optimize inventory, forecast trends, and formulate/adapt strategic plans.
- Transformation of communication and fostering of remote work: Flexible, global work environments are possible due to new digital collaboration tools and cloud systems. This incoming tools has modified organizational hierarchy, workforce management, and internal interaction.
