1 point possible Essay

Describe three areas in which an information system can support a business process.

Maximum 300 words.

Information systems helps us to support many business processes acting, for instance, on productive key aspects as:

- More efficient operative and decision-making workflows. Information systems help us to process larger amount of data/information and to priorice data driven decision-making and innovative

processes.

- Better and quick adaptation to incoming changes. The more we analyse markets/customers tendencies and changes, the better we fit to them new demands/requirements.
- Custom cost-effective products/services. When we combine information system skills with innovative productive materials and techniques, we enable to offer personalized products/services based on every client willings, with smaller costs.
