Your Answers:

1 0 / 2 points Multiple choice

Situation: You are driving within the city limits and you are aware that the maximum speed limit is 50 km per hour. You stick to this limit because a permanent speed camera is set up beside the gas station that you will pass.

Question: What does the described situation refer to?

× wisdom

Correct Answer: **knowledge**

- knowledge
- information
- data

Feedback

Based on answering incorrectly

The correct answer is 'knowledge.'

The number 50 is data. So, a road sign saying '50' is information because the sign gives meaning to it. Wisdom would be using that knowledge over the long term, every time you drive in that area, and doing so even in challenging circumstances (for example, if you are running late).

2 / 2 points Multiple choice

Which of the following statements about information systems and information technology is true?

- ✓ (●) Information technology makes managers more productive and increases the number of employees reporting to a single manager.
- ( ) If you grew up with information technology, you are an informed user.
- ( ) Managing information systems in modern organisations is becoming easier as more and more organisations rely on technology for everyday activities.
- ( ) Managing the IS function within an organisation is the exclusive responsibility of the IT department.

Feedback

General Feedback

The correct answer is ‘Information technology makes managers more productive and increases the number of employees reporting to a single manager.’

See Section 1.1 of the textbook.

3 points possible Essay

Explain in your own words what digital transformation means. *Maximum 100 words.*

Digital transformation is the process of integrating digital technologies into an organization's activities, strategies and business processes; it could be also useful for people, in general. Its main purpose is to improve efficiency, productivity, and competitiveness while adapting to new challenges and changing customer needs. It can involves adopting new technologies, such as artificial intelligence, cloud computing or automation, but also changing how people work, communicate and deliver services. Moreover, digital transformation helps organisations to innovate, make better decisions and create new opportunities in an increasingly digital environment.

4 2 / 2 points Multiple choice

Information systems can support business processes in several areas.
Which of the following options is **NOT** one of these areas?

- ◯ monitoring process performance
- ◯ executing processes
- ✓ ● mapping process activities
- ◯ capture and storage of process data

Feedback

General Feedback

See section 2.1 and textbook p. 41.

- The option 'executing processes' is incorrect. Executing processes is one of the areas in which information systems can support business processes.
- The option 'monitoring process performance' is incorrect. Monitoring process performance is one of the areas in which information systems can support business processes.
- The option 'mapping process activities' is correct. This is not one of the areas in which information systems support business processes.

The option 'capture and storage of process data' is incorrect. Capturing and storing process data is one of the areas in which information systems can support business processes.

5 2 / 2 points Multiple choice

There are different approaches to improving business processes.
Which approach focuses on reducing variation in process outputs?

- ◯ business process reengineering
- ◯ business process management
- ◯ business activity monitoring
- ✓ ◉ business process improvement

Feedback

General Feedback

See section 2.2 and textbook pp. 45–48.

- The option 'business activity monitoring' is incorrect. Business activity monitoring is a real-time approach to measuring and managing business processes.
- The option 'business process improvement' is correct. Business process improvement (BPI) is an incremental approach that focuses on reducing variation in process outputs by identifying the root causes of variation in the process itself or in the process inputs.
- The option 'business process management' is incorrect. Business process management (BPM) is a management system that includes methods and tools to support the design, analysis, integration, management, and continuous optimisation of core business processes throughout the organisation. BPM integrates disparate BPI initiatives to ensure consistent strategy execution.

The option 'business process reengineering' is incorrect. Business process reengineering is a strategy to make an organisation's business processes more productive and profitable. The key to BPR is that companies examine their business processes from a 'clean sheet' perspective and then determine how to best reconstruct those processes to improve their business.

6 2 / 2 points Multiple choice

Which general competitive strategy of an organisation provides unique products, services or product features in comparison to its competitors?

- ✓ differentiation strategy
- operational effectiveness strategy
- customer-oriented strategy
- innovation strategy

Feedback

General Feedback

See textbook, Section 2.4, pp. 63–64.

The answer 'differentiation strategy' is correct.

- The answer 'innovation strategy' is incorrect. With an innovation strategy, an organisation introduces new products and services, adds new features to existing products and services, or develops new ways to produce them.
- The answer 'customer-oriented strategy' is incorrect. With a customer-oriented strategy, an organisation focuses on satisfying customers.

The answer 'operational effectiveness strategy' is incorrect. With an operational effectiveness strategy, an organisation improves the way business processes are executed so that they are more effective than those of competitors.

7 2 / 2 points Multiple choice

What does ‘business-IT alignment’ mean?

- ◯ innovating an organisation's products or services with IT
- ✓ ◉ the integration of the IT function with the organisation's strategy, mission, and goals
- ◯ real-time measurement and management of business processes using IT
- ◯ collaboration between different departments to achieve an organisation-wide information system

Feedback

General Feedback

See textbook, Section 2.4, p. 65. The answer ‘the integration of the IT function with the organisation's strategy, mission, and goals' is correct.

- The answer 'innovating an organisation's products or services with IT' is incorrect. This is one of the possible competitive strategies an organisation can follow.
- The answer 'real-time measurement and management of business processes using IT' is incorrect. This is a description of business activity monitoring (BAM).

The answer 'collaboration between different departments to achieve an organisation-wide information system' is incorrect.

8 2 / 2 points Multiple choice

What is meant by ‘ethics’?

- Conflicting interests between organisations on the one hand and individuals, society and/or politics on the other
- ✓ Principles about what is right and wrong that individuals apply when making behavioural choices
- Legislation and policy on the use of information technology in society
- The set of professional codes and codes of conduct describing the rights and obligations of professionals

Feedback

General Feedback

See textbook, section 3.1, page 72 for the definition of ethics.

9 2 / 2 points Multiple choice

Which ethical approach states that an ethical action is the one that best protects and respects the moral rights of the parties involved?

- Utilitarian approach
- Deontology approach
- ✓ Rights approach
- Fairness approach

Feedback

General Feedback

See textbook, section 3.1, pages 72-73.

and explain the ethical issue around the Crime Anticipation System:

- Who are the stakeholders and what are their values or interests?
- Which category(ies) does this ethical issue belong to?

First and foremost, this article explains a real case where facial recognisement systems can lead to a false positive and to incorrect decisions, wrongly accusing an innocent person to a crime. It is widely known that information systems judgement could fail and we need to be aware about this reality.

In this article, represented and involved stakeholders are Mr. Robert Williams (a black American citicen), Detroit Police Department (a US law enforcement agency), Technology Developers and also society. To summarise, Mr. Williams's main interest was to prove his innocense. On the other hand, Police Department consider he has commited this mentioned shoplifting and hence they have arrested him. And the rest are less relevants, but also importants.

This concerned ethical issue, belongs in my humble opinion to rights approach, but it also involves, at the same time, fairness, justice and accountability ones. For this reason, several relevant factors should be highlighted in provided article.
First and foremost, Mr. Williams was detained for approximately 30 hours, relying too heavily on facial recognition as an evidence, and likelyhood important evidences of racial disparities in facial recognition.

Due to this fact, Robert Williams values and interests are freedom, dignity, privacity, fair treatment and protection. On the other side, the Detroit Police Department's interests include public safety, effective investigation, accurate identification and public trust. Furthermore, technology developers/suppliers focus on system reliability, commercial interest, responsible development and accountbility. Last but not least, society and civil rights organizations focus on equal treatment, protection againist discrimination, civil liberties and responsible use of this kind of technology.

11 2 / 2 points Multiple choice

What is meant by ‘information security’?

- ○ the probability of a threat harming a system
- ✓ ◉ the processes and policies that protect a system from threats
- ○ identification of potential information risks and associated damages
- ○ the legal activities carried out over computer networks

Feedback

General Feedback

See textbook, Section 4.1, p. 94 for the description of information security. The probability that a threat will cause damage to a system is the system's vulnerability. “Information security refers to all processes and policies designed to protect an organization’s information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction.”

12 2 / 2 points Multiple choice

What is an example of a human error that can threaten information systems?

- ◯ compromises to intellectual property
- ✓ ◉ poor choice and incorrect use of passwords
- ◯ unauthorised access to information
- ◯ lack of management support

Feedback

General Feedback

See textbook Section 4.2, pp. 96–98 for examples of human errors that pose a threat to information systems. ‘Unauthorised access to information’ is an example of a deliberate threat to information systems. ”Compromises to intellectual property” is an example of a deliberate threat to information systems. 'Lack of management support' is one of the factors that increase the vulnerability of information systems.

13 2 / 2 points Multiple choice

There are various forms of deliberate threats to information systems. One of these threats involves damaging an organisation's website, which can damage its image and cause customers to lose confidence. Which threat is meant here?

- ◯ information extortion
- ✓ ◉ vandalism or sabotage

- ◯ cyberterrorism
- ◯ software attack

Feedback

General Feedback

See textbook, Section 4.3, pp. 98–106 for a description of various forms of deliberate threats to information systems.

14 2 / 2 points Multiple choice

One of the risk mitigation strategies for information systems is risk acceptance.
What does this strategy entail?

- ✓ ◉ renouncing protection and accepting occurring damage
- ◯ compensating for losses, such as taking out insurance
- ◯ implementing measures that minimise the impact of threats
- ◯ developing a way of recovery after the occurrence of a threat

Feedback

General Feedback

See textbook, Section 4.4, pp. 107–108.

Compensating for losses is part of the 'risk transfer' strategy.

Developing a recovery plan is one of the goals/components of risk mitigation and applies to all strategies. Implementing measures to minimise the impact of threats is a description of the strategy 'risk mitigation'.
