What are the four major types of security controls? List and describe them in your own words, and give an example for each category.

Maximum 350 words.

- Physical Controls: Protect physical facilities, data centers, and hardware equipment from unauthorized physical access, theft, or natural hazards.
  - *Example:* Keycard badges, biometric door locks, security guards, or fire suppression systems.
- Access Controls: Restrict digital access to networks, applications, and sensitive data to ensure only authorized users can perform specific actions.
  - *Example:* Multi-Factor Authentication (MFA) or strong password policies combined with role-based user permissions.
- Communication (or Network) Controls: Protect data while it travels across computer networks, preventing unauthorized interception, tampering(change without authoring), or network disruptions.
  - *Example:* Firewalls, Virtual Private Networks (VPNs), and data encryption algorithms.
- Application Controls: Ensure that specific software programs function correctly, process input data accurately, and maintain data integrity during transactions.

- *Example:* Automatic input validation (such as ensuring a field only accepts valid email addresses or dates) and transaction audit logs.
